

Maplewood Substation Construction Notification

March 2024

To our Valued Neighbors,

As one of the regional electricity providers in New England, we regularly update our electric systems to ensure our customers continue to receive the best possible service to their homes, businesses and communities, every day.

National Grid will begin construction on a project in your area. Please see the following details:

Where: The project will take place at our existing substation located off Broadway (Route 99) in Malden, MA. (See map to the right.)

When: Construction will begin mid-March of 2024 and is expected to be complete Fall 2025. Work is expected to be Monday thru Friday, 7am to 5pm (in accordance with the City of Malden restrictions) with weekend work as needed.

What: New fence installation, vegetation management and tree removal, and installation of a new control house, and supporting equipment. In addition, to meet the growing electricity needs of the area, the existing transformer will also be replaced as part of this project.

You will see an increase in trucks and equipment entering and exiting the work site.

Why: National Grid is committed to delivering safe and reliable electricity to the region, to do so we will need to make necessary station protection and monitoring upgrades within a new control house to accommodate new equipment.

If you have any questions or would like further information, please feel free to contact me.

Sincerely,

Bethany Rocha
